CREER COLOMBIA 1

PRODUCTION OF UREA FERTILIZER

Information of the **ENTERPRISE**

In EAFER we promote, manage, execute and administer at the South American level, projects for the assembly and construction of petrochemical plants for the production of nitrogenous inorganic compounds, ammonia, urea, ammonium nitrate (fertilizer grade), ammonium nitrate (explosive grade), fertilizer mixture plants, among other components essential for agriculture and mining in the region.

Initial Investment
Capex USD \$40 millions

*TMR: COP \$ 4.300

Investment Mechanism
Equity

Quantifiable Impact
Reactivation of agriculture, job creation, import substitution.

Investment **PROPOSAL**

The attraction of the urea production project is that there is no competition in the local market for its production, this compound consumed in the country is imported (which has higher costs than those produced by the project), which implies a significant decrease in fertilizer costs for Colombian agricultural producers, not only in simple fertilizer but also in a large number of fertilizer mixtures that use urea as a base in their preparation, signifying competitive advantage of the project due to urea locally produced.
