

MINI SOLAR FARMS

Private Project

Company's INFORMATION

Our mission is to bring clean energy to anyone in the world, through sustainable and digital investments.

Initial investment
Capex USD 41.8 Millions
* TMR: 4.500

Investment mechanism
Debt or Equity

Quantifiable Impact
Local people are employed, free internet coverage is offered and agricultural and educational processes are developed in the mini solar farm

Investment PROPOSAL

Thirty-eight solar power plants will be installed in isolated areas of Colombia that will work as clean energy generators in communities historically affected by poor energy supply. Each power plant is a mini solar farm with an installed capacity of 1.38 MWp that functions as a distributed generator and is therefore connected to the local distribution system, saving the need for the power transmission process and avoiding losses in the grid.
